

This class teaches three techniques for mixing metals: Lamination, Marriage, and Solder.

Brush up on your sweat soldering skills, and bring a **A LOT** of Hard silver solder

Also, bring:

- Soldering supplies: pick, tweezers, and some Medium silver solder.
- 20 gauge copper, brass or silver sheet
- 2 pieces of 22 gauge sheet metal in two contrasting colors (silver, copper or brass)
- 24 gauge copper, brass or silver sheet
- Saw blades - 3/0 and 6/0 or 8/0
- Sandpaper
- Files

The pieces of sheet metal do not have to be large, but should be at least 2" square.

Plan for contrasting colors, like copper background with brass or silver design. Or, a silver background with a copper or brass design.

I will have some large copper and brass sheet to sell if you need it, but I will NOT have any silver sheet for sale.

See you soon!
